

Abstract

Title:

The comparison of components in football performance

Key words:

Football match analysis, FC Viktoria Pilsen, AC Sparta Prague, Gambrinus League

The problem definition:

All football matches played during season 2013/2014 in the Czech first football league were, for the first time in history, analysed with Instat programme. Data from analysis served as main source for comparison of two most successful teams – FC Viktoria Pilsen and AC Sparta Prague. I will try to analyse these statistical data and consequently define key statistics for both teams.

The aim of the thesis:

Comparison and interpretation of performance data acquired by statistical programme Instat is the primary aim of this thesis.
